# Digital Health Blueprint 2023-2033

The Blueprint outlines the Australian Government's vision for the role digital health capabilities will play in delivering a more person-centred, connected and sustainable health system by 2033.

Our vision for digital health in Australia is:

*Trusted, timely and accessible use of digital and data underpins a personalised and connected health and wellbeing experience for all Australians*

Australian Government  
Department of Health and Aged Care

Digital Health Blueprint  
2023 - 2033

A more personalised and connected health  
and wellbeing experience for all Australians

# Key priority areas

## National standards

- FHIR
- eRequesting
- Clinical decision support
- Clinical terminology
- Medication charts

## Healthcare identifiers

- Modernise legislation
- Progress actions within the National Health Interoperability Plan
- Investigate the use of health care identifiers in other care settings

## National Health Information Sharing Infrastructure

- Modernise MHR to data-led system
- National Health Information Exchange capabilities
  - Electronic prescribing
  - Digital medicines enhancements
- Digital health maturity

## Legislation

- Share by default to MHR
- National consent-based information sharing
- Mandated use of electronic prescribing for high-risk medicines
  - Cyber

# What could Australia's learning healthcare system look like?

Patients' health information will follow them across their health and wellbeing journey, from conception until death.

Patients will be able to actively participate in their care and make informed decisions with the support of their healthcare team through the app of their choice.

Healthcare professionals will have access to a joined up, near-real-time view of their patient's health information at the point of care.

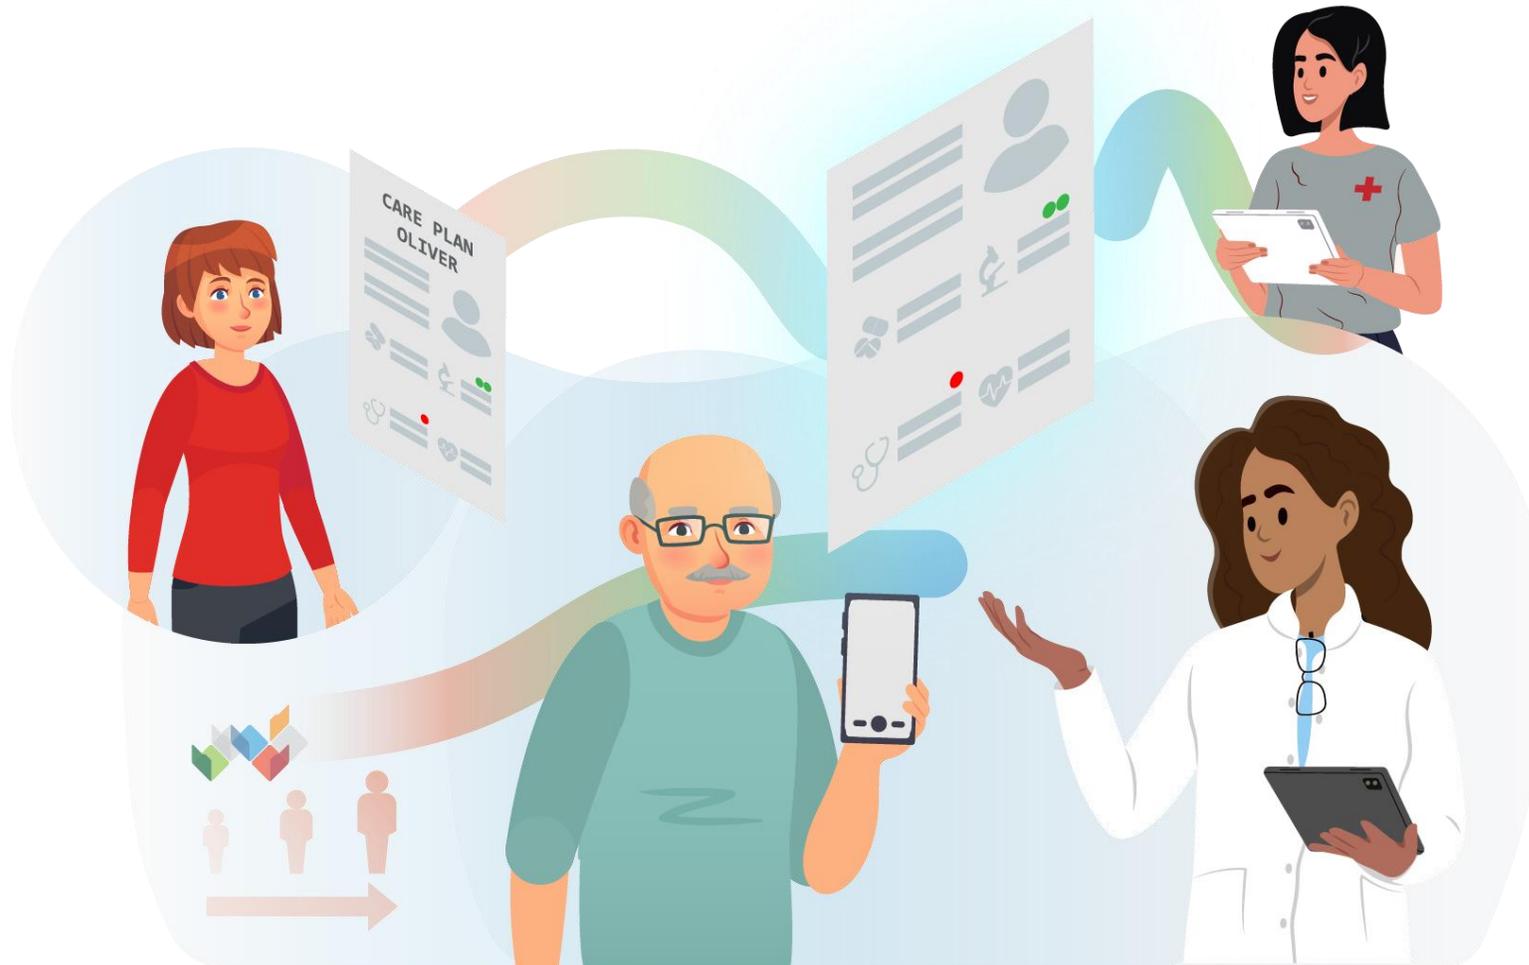

This will support safer and more personalised patient care. It will speed up and simplify systemic workflow impediments including reducing the information gathering and sharing burden.

Australia's Health System can use health data generated at the point of care, through established feedback loops.

Providing insights to inform health system planning and support the evolution of existing and new treatments and therapies. Efficiencies will be gained from reduced service duplication and less time spent on administration.

**Better use of health data will support a more connected care experience for all**

# Discussion: Placing consumers and culture at the heart of digital transformation

Trust

Safety and Security

Choice and Control

Leadership and Accountability

Individual and Collective Benefit
