**ABSTRACT**

**Background:** COVID-19 has put extraordinary stress on healthcare workers. Few studies have evaluated stress by worker role, or focused on experiences of women and people of color.

**Methods:** The "Coping with COVID" survey assessed US healthcare worker stress. A stress summary score (SSS) incorporated stress, fear of exposure, anxiety/depression and workload (Omega 0.78). Differences from mean were expressed as Cohen's d Effect Sizes (ESs). Regression analyses tested associations with stress and burnout.

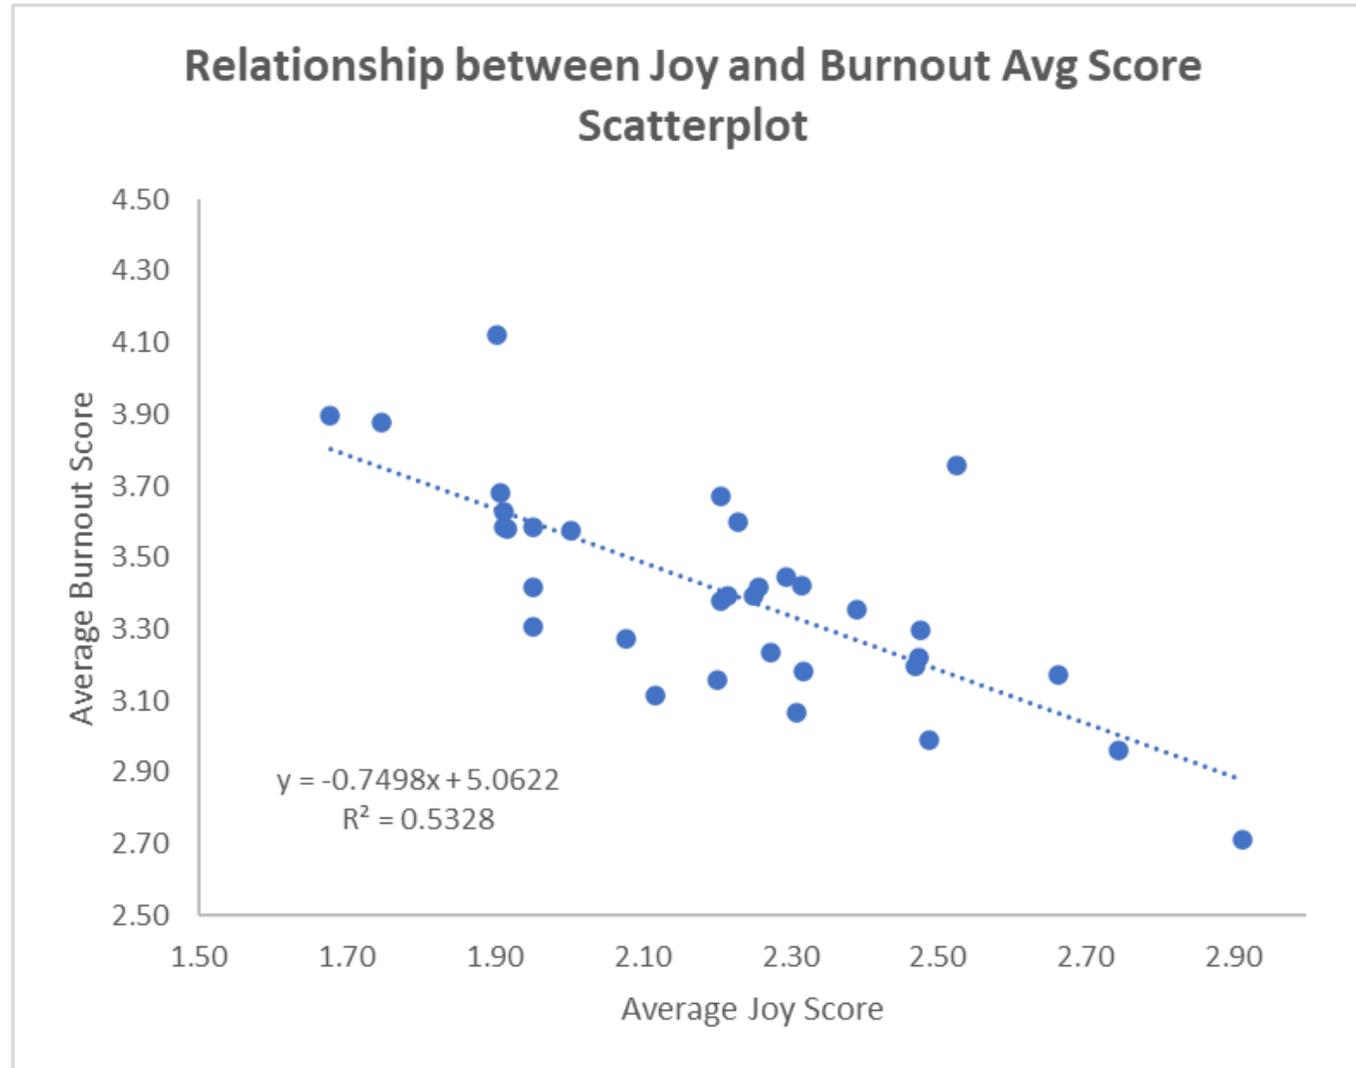

**Findings:** Between May 28 and October 1, 2020, 20,947 healthcare workers responded from 42 organizations (median response rate 20%, interquartile range 7% to 35%). Sixty one percent reported fear of exposure or transmission, 38% reported anxiety/depression, 43% suffered work overload, and 49% had burnout. Stress scores were highest among nursing assistants, medical assistants, and social workers (small to moderate ESs,  $p < 0.001$ ), inpatient vs outpatient workers (small ES,  $p < 0.001$ ), women vs men (small ES,  $p < 0.001$ ), and in Black and Latinx workers vs Whites (small ESs,  $p < 0.001$ ). Fear of exposure was prevalent among nursing assistants and Black and Latinx workers, while housekeepers and Black and Latinx workers most often experienced enhanced meaning and purpose. In multilevel models, odds of burnout were 40% lower in those feeling valued by their organizations (odds ratio 0.60, 95% CIs [0.58, 0.63],  $p < 0.001$ ).

**Interpretation:** Stress is higher among nursing assistants, medical assistants, social workers, inpatient workers, women and persons of color, is related to workload and mental health, and is lower when feeling valued.

# The Joy in Work Framework

4. Use improvement science to test approaches to improving joy in your organisation

3. Commit to making *Joy in Work* a shared responsibility at all levels

2. Identify unique impediments to *Joy in Work* in the local context

1. Ask staff “what matters to you?”

**“What matters to you? What makes a good day?  
When you are feeling your best, what is happening?”**

**“What gets in the way of a good day? What are the  
‘pebbles in your shoes’?”**

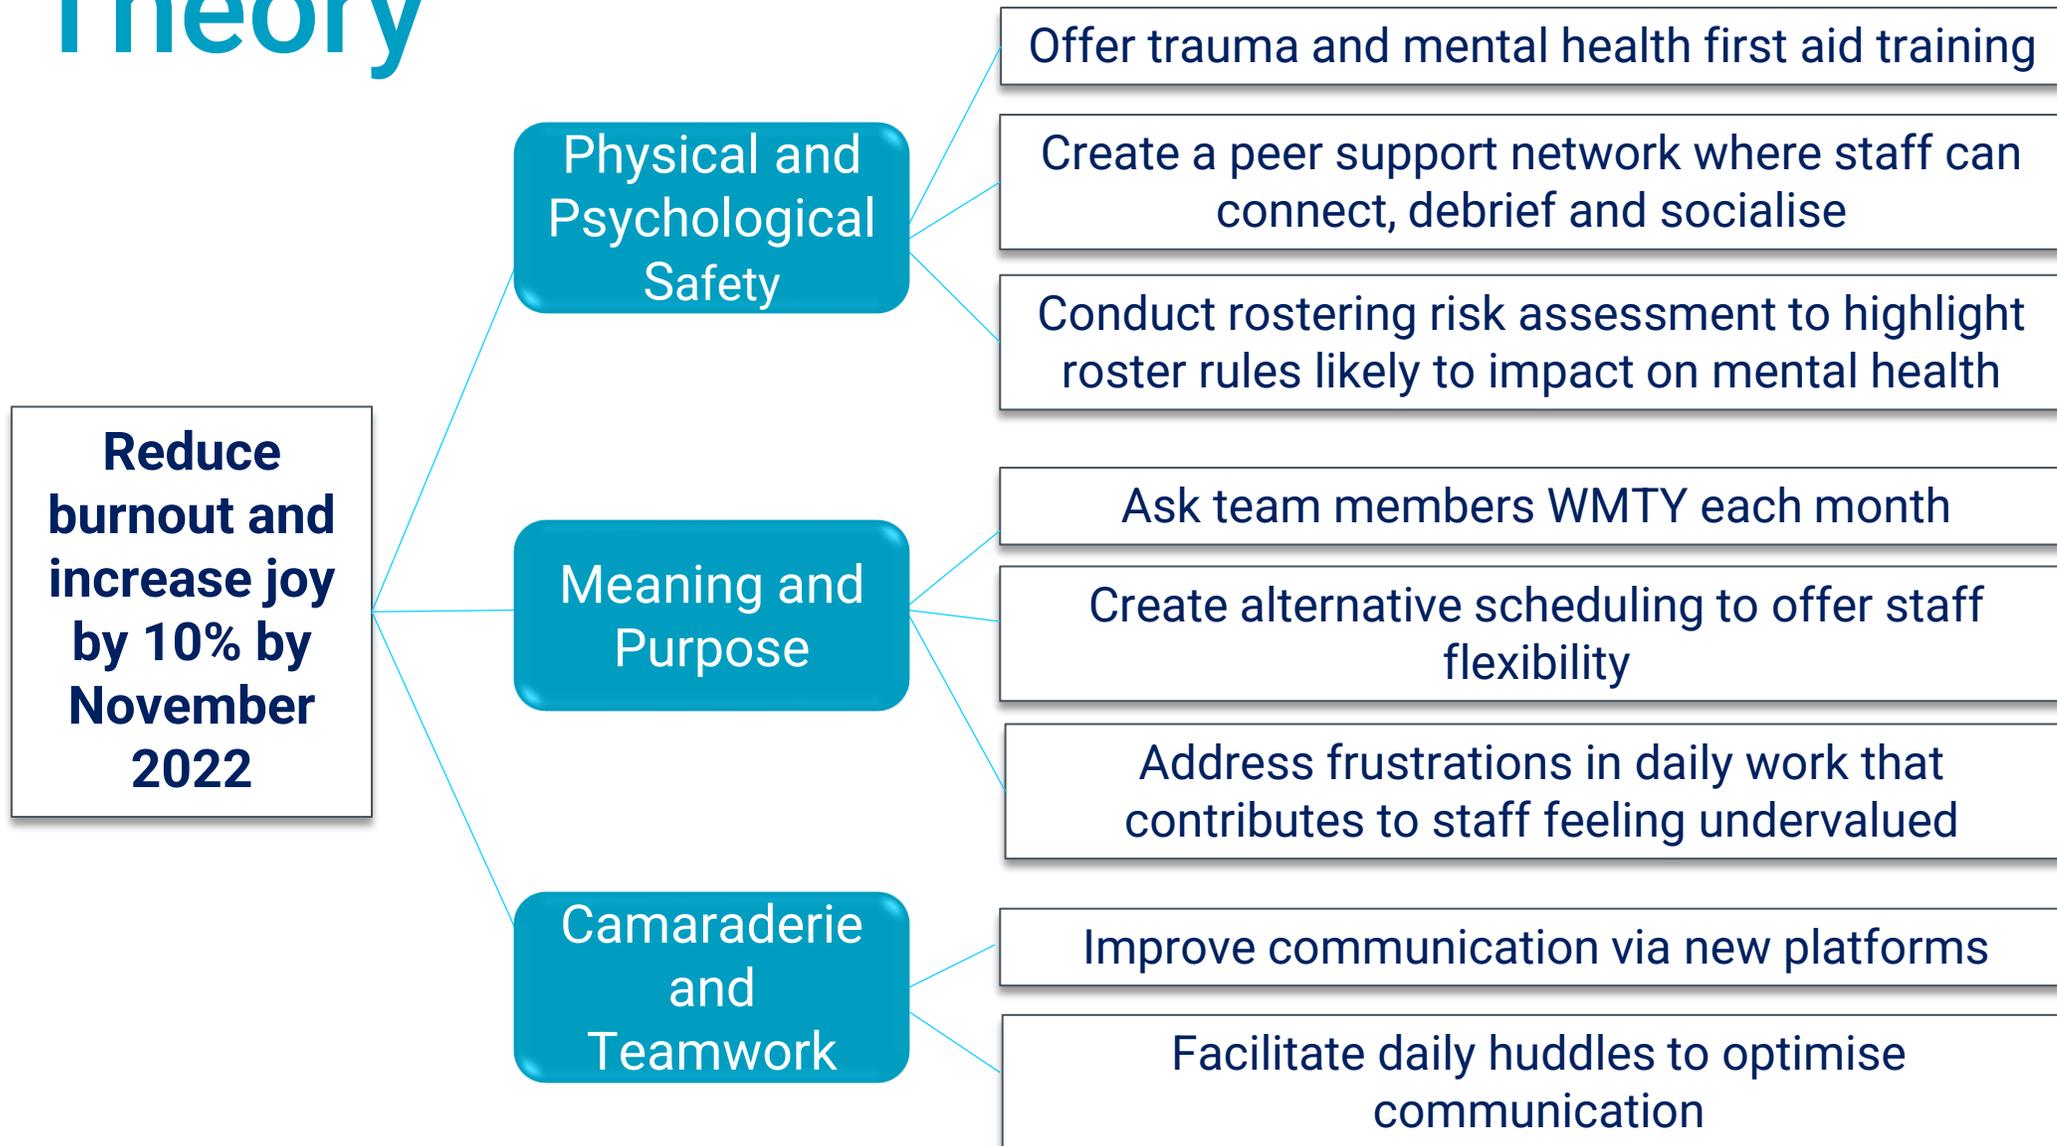

Ask the question, listen to the first response, then allow for deeper reflection about the initial comments.

Be comfortable with silence. Practice curiosity. Listen to understand.

You do not have to fix everything now. Understand what matters, then work together to use improvement science tools to address the things that get in the way of what matters.
