

SINGAPOR

 **EnsureSaferSystems:**

Unlocking Possibilities towards  
**HIGH RELIABILITY**

**Dr Albert Ty**

Director, Patient Safety & Quality Improvement Division

Conflict of Interest: NONE

# Singapor

e

- Land size:  $734.3 \text{ km}^2$
- Total Population: 5.6M
- Population density:  $7796 \text{ person/km}^2$
- Four ethnic groups

# Singapore Public Healthcare System

- 8 General Hospitals
- 2 Specialised Hospitals
- 6 Community Hospitals
- 10 National Specialty Centres
- 23 Polyclinics

# Singapore's healthcare quality and safety journey

## REGULATIONS

- Medical Registration Act (1953)
- Registration Ordinance of Maternity Homes and Nursing Homes (1959)
- Private Hospital and Medical Clinics Act (1980)
- Healthcare Services Act (2020)

- Quality Assurance Programmes
- Sentinel Events Monitoring
- Clinical audits

## ACCREDITATION

- JCI accreditation (2004-2016/2017)

EnsureSaferSystems

A journey of resilience towards **HIGH RELIABILITY** in partnership with JCI to -

- Empowerment and advocating for our patients and healthcare staff in
- A Culturally safe environment
- To Improve quality of care and safety for healthcare institutions

HIGH RELIABILITY also requires a *mindset shift from*

Emphasis on compliance

High stakes assessments

Heavy reliance on external experts

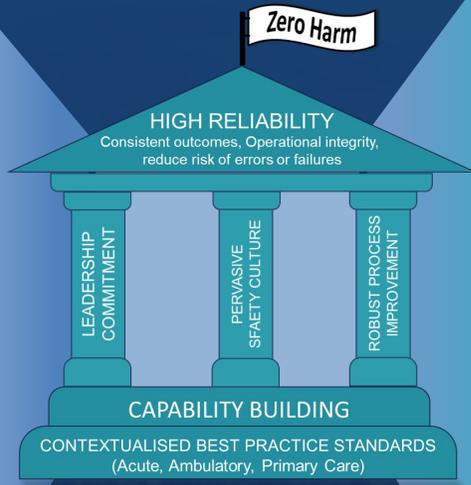

Manual data collection

Goal: Successful accreditation

HIGH RELIABILITY also requires a *mindset shift from*

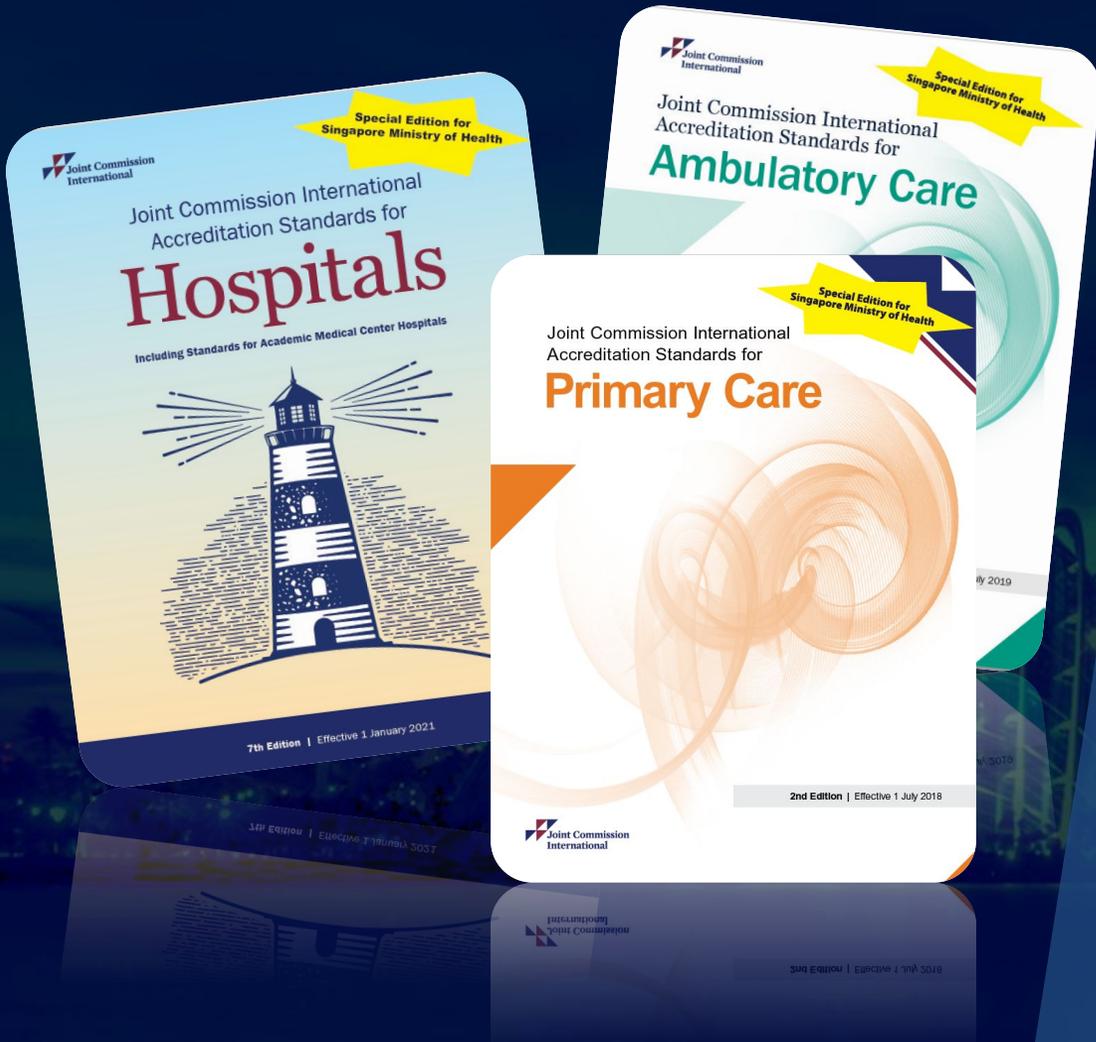

- Emphasis on compliance
- High stakes assessments
- Heavy reliance on external experts
- Manual data collection
- Goal: Successful accreditation

DESIRED

- STATE Improvement as a lifestyle
- Continuous formative assessments
- Locally capable and resilient
- Digitalised collection, reporting and analytics
- Goal: Zero harm

# EnsureSaferSystems

# EnsureSaferSystems

Raise internal capacity and capability for self-sufficiency in self-assessment, change management, and action planning through a suite of training activities.

# EnsureSaferSystems

Strengthen 3 key elements:

- Sustained leadership commitment
- Culture of safety and continuous learning
- Robust process improvement

# EnsureSaferSystems

Putting it all together

## Putting it all together

### IV. Measuring Performance

- Use Tracer Methodology (logged into JCI AMP digital platform) to assess whether areas of concern have been addressed

### III. Deploying QI activities

- Testing change ideas
- PDSA work
- Coaching and education

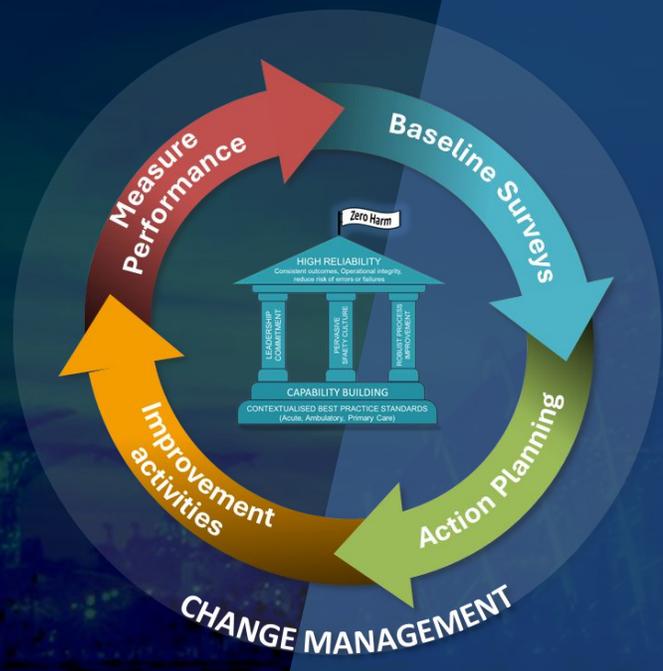

### I. Baseline Surveys

- Broad-based Baseline Survey conducted by JCI Surveyors to identify areas of concern (using SAFER Matrix™)
- JCI High Reliability Maturity Assessment (Oro® 2.0) to determine the organization's perceive HRO maturity level

### II. Developing Action Plans

- Prioritise areas of concern (national and hospital-level)
- Identifying strategic and tactical approaches to action planning; designing QI activities using QI methodologies to address prioritized areas of concern.
- Coaching and education

## Putting it all together

### I. Identification of common areas of risk for patient safety

- Covering 4 domains where common high risk or widespread risks were identified:

- |                                                                                                                                                                               |                                                                                                                                                                              |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <ol style="list-style-type: none"> <li><b>Clinical</b></li> <li><b>Information Management</b></li> <li><b>Care Environment</b></li> <li><b>Contract Management</b></li> </ol> | <p>Patient identification, Procedural sedation,</p> <p>Copy-and-paste, abbreviations</p> <p>Fire detection, laser safety</p> <p>Evaluation of contracted service quality</p> |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

### II. Developing Action Plans – IPSG.1 Patient Identification

- Hospital 1 – Identification of 2 core identifiers instead of 4 interchangeable ones  revision of policy
- Hospital 2 – Use of 2 unique identifier not using room number or ward location for meal trays  develop harmonized electronic meal ordering system
- Hospital 3 – Use of one unique patient ID code did not confer same benefit as 2 patient identifiers  addition of another identifier

## Putting it all together

### IV. Developing Tracers to measure performance

- Tracer assessment tool consist of a series of questions raised during the course of a patient's journey intended to demonstrate compliance with intended standards.

#### IPSG.1

- When staff delivers meal trays, does staff ask patient for 2 identifiers and compared to the source document (e.g., meal tray sheet)?
- Does staff perform patient identification at beginning of specimen collection, before administration of medication, start of radiologic procedures?
- AMP documents performance (compliance vs non-compliance) based on observations

### III. Deploying QI activities

- Testing change ideas
- PDSA work
- Coaching and education

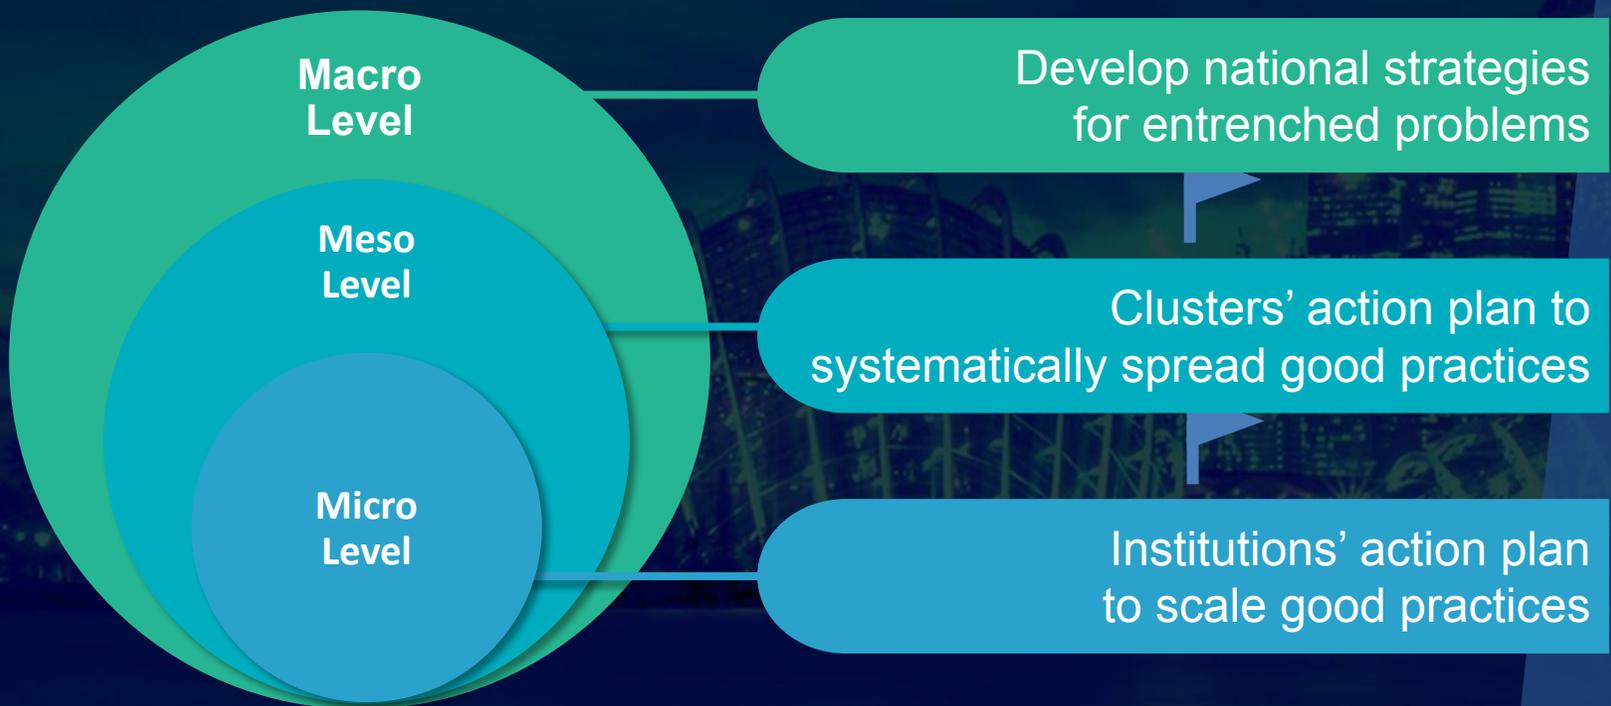

## Fostering continuous improvement

### I. Self-Assessments (Mock AMP Dashboard)

Is also a cross-institutional learning system

**ESS Community of Practice**  
(Rotating Chairs from each Cluster)

*Ground-up movement tackling national areas of concern*

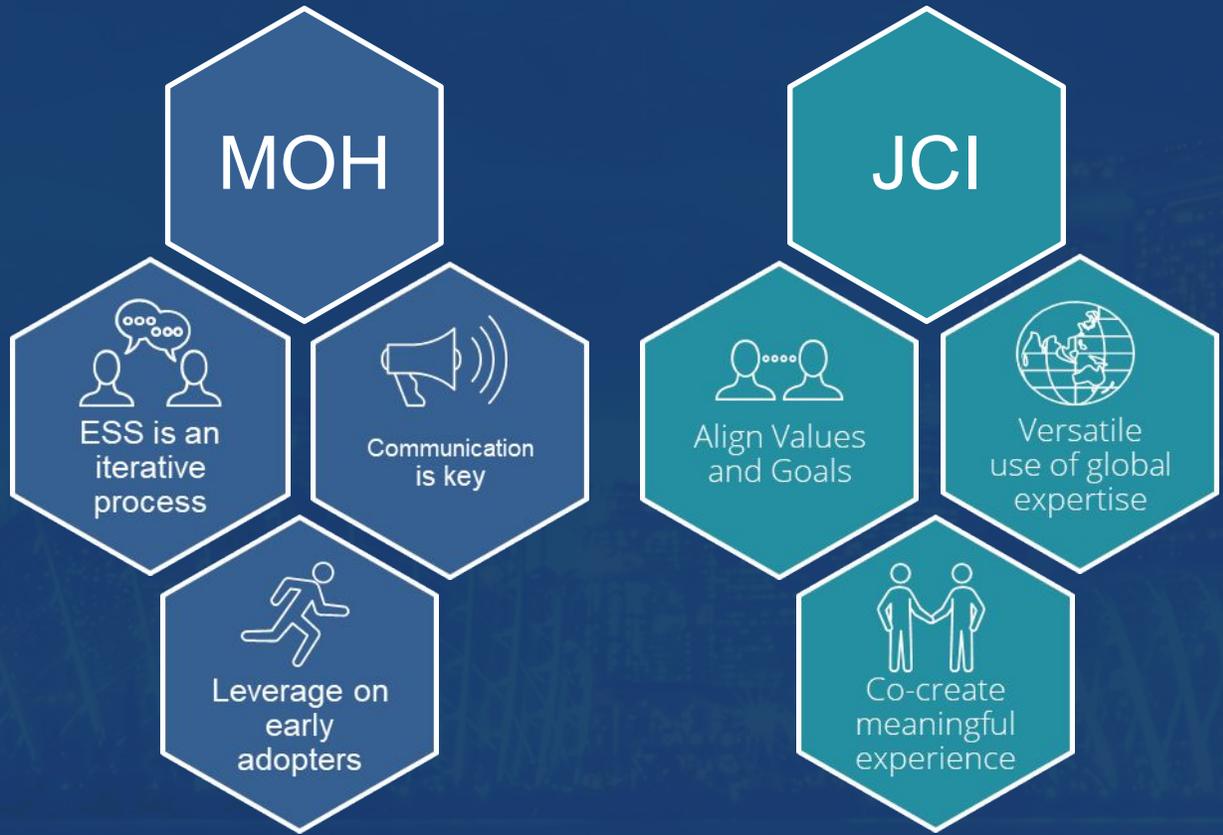

ESS Leaders of each Cluster/PHI

**CURRENT COMMUNITIES OF PRACTICE:**

1. Abbreviations (SHS)
2. Suicide & Self Harm Screening (NHG)
3. Procedural Sedation (NUHS)
4. Radiological Errors (SHS)
5. Facility Management & Safety (NHG)
6. Serious adverse event reporting
